

# FireTower

## AutoRun Entry Validation

FireTower will discover and authenticate all existing AutoRun settings on your computer

## Real-Time Alerts

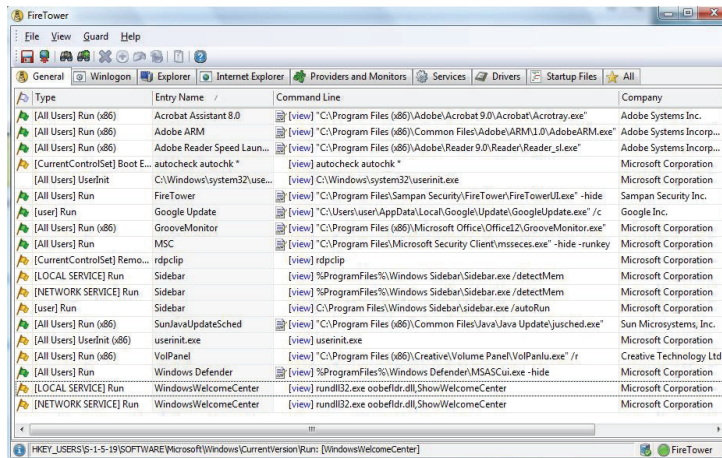

FireTower will automatically detect and notify you of all incoming software attempting to insert AutoRun entries on your computer in real-time

## All Relevant Information Is One-Click Away

Discover, correlate, and analyze AutoRun settings. All critical information is available either on-screen or one-click away from Faultwire.com®

## Share Detailed AutoRun Settings with a Support Professional

FireTower Snapshot Viewer simplifies the process of asking for help by allowing you to share a detailed snapshot of your AutoRun settings with peers or professionals

- Analyze and authenticate your existing AutoRun settings
- Real-time interception of software attempting to insert AutoRun entries
- Troubleshoot alerts by sharing your AutoRun settings with peer or professional help through **FireTower Snapshot Viewer**
- For **Windows 7/Vista/XP x86/x64**

There are numerous ways for malicious software to gain access to your computer, but to ensure that they remain there they often use a common trick: creating an AutoRun entry on your computer. An AutoRun entry allows software of all types, malicious or safe, to establish persistence on a computer by telling your computer to automatically execute their software every time your system boots up. Many types of malware take advantage of this functionality.

FireTower helps you by keeping an eye on all AutoRun entries. FireTower will take a look at all of your existing software and tell you what is safe. FireTower will even automatically intercept and notify you of any software attempting to install AutoRun entries on your computer whether they are legitimate or suspicious.

FireTower is provided free of charge for personal use. For information about commercial use or distribution please contact us at [FireTower@Sampansecurity.com](mailto:FireTower@Sampansecurity.com)

FireTower is a trademark of Sampan Security Inc. Faultwire is a registered trademark of FAQware.

The AutoRun information that FireTower provides is extensive and can be difficult for a casual user to interpret. That is why we provide a feature called FireTower Snapshot Viewer. Snapshot Viewer allows you to upload a snapshot of your current AutoRun settings to the internet and generates a link that you can share with either computer savvy friends or professional technicians. Snapshot Viewer allows other people to view your AutoRun settings as if they were sitting in front of your computer.

FireTower is designed to run alongside traditional Anti-Virus software. FireTower provides the features missing from traditional security solutions which fail to protect you from undiscovered malware. FireTower completes your computer security solution.
